Research Summary

Polyester plasticizers are additives used in the production of plastics, specifically polyvinyl chloride (PVC), to enhance flexibility, workability, and durability. These plasticizers are typically esters of dicarboxylic acids and polyols, and they act by reducing the intermolecular forces between polymer chains, allowing them to slide past one another more easily. In the context of PVC, which is inherently rigid, the addition of polyester plasticizers imparts flexibility and makes the material more suitable for applications such as cable insulation, flooring, and inflatable structures. Polyester plasticizers are chosen for their compatibility with PVC, low volatility, and resistance to migration, ensuring long-term stability and performance of the plasticized material. The selection of a specific polyester plasticizer depends on the desired properties of the final plastic product and the intended application requirements.

The major global manufacturers of Polyester Plasticizers include DIC Corporation, UPC Group, BASF, Eastman, Polynt Group, Adeka, Chang Chun Group, Hallstar, Lanxess, J-PLUS, etc. The global players competition landscape in this report is divided into three
