Research Summary

Polyester polyols are a type of polymeric polyol derived from the reaction of a dicarboxylic acid with a diol. These polyols are a crucial component in the production of polyurethane polymers. The polyesterification process results in a polymer with hydroxyl (-OH) functional groups at each end, making it reactive in the subsequent polyurethane synthesis. Polyester polyols contribute to the flexibility, durability, and chemical resistance of polyurethane materials. They are widely used in various applications such as coatings, adhesives, sealants, and elastomers, providing tailored properties depending on the choice of dicarboxylic acid and diol used in their synthesis. The versatility of polyester polyols allows for the formulation of polyurethane products with a wide range of characteristics, making them suitable for applications in industries like construction, automotive, and furniture.

The major global manufacturers of Polyester Polyols include Stepan, Huafeng, COIM, Xuchuan Chemical, BASF, Synthesia Technology, Huada Chem, Huide Science & Technology, Huntsman, Covestro, INOV, Miracll Chemicals, Arkema, BCI Holding,
