Research Summary

Polyester is a synthetic polymer composed of repeating ester units and is one of the most widely used materials in the textile and fiber industry. It is produced through the polymerization of dicarboxylic acids and diols, resulting in a versatile and durable material. Polyester fibers exhibit properties such as strength, resistance to wrinkles and abrasion, and quick-drying capabilities. These characteristics make polyester a popular choice for a wide range of applications, including clothing, home furnishings, and industrial uses. Additionally, polyester is often blended with other fibers like cotton to combine their respective advantages. Beyond textiles, polyester is used in the production of various products such as bottles, films, and engineering plastics due to its versatility, cost-effectiveness, and adaptability to different manufacturing processes.

The major global manufacturers of Polyester include Reliance Industries, Indorama Ventures, William Barnet & Son, Green Fiber International, Sarla Performance Fibers, Polyfibre Industries, Toray Industries, Stein Fibers, Diyou Fiber, Silon sro, Swicofil, etc. The global players competition landscape in this report is divided into three tiers.
