Research Summary

Polyetherimide (PEI) is a high-performance thermoplastic polymer known for its excellent thermal, mechanical, and electrical properties. It belongs to the family of amorphous engineering plastics and is characterized by high heat resistance, dimensional stability, and inherent flame resistance. PEI exhibits exceptional strength and stiffness at elevated temperatures, making it suitable for use in demanding applications. It also has excellent electrical insulating properties and resistance to environmental stress cracking. PEI is commonly used in industries such as aerospace, electronics, automotive, and medical devices for applications including electrical connectors, printed circuit boards, automotive components, and medical instruments. Its combination of thermal performance, mechanical strength, and electrical properties positions PEI as a versatile material for engineering applications where reliability and durability are critical.

The major global manufacturers of Polyetherimide (PEI) include SABIC, RTP, Ensinger, Mitsui Chemicals, etc. The global players competition landscape in this report is divided
