Research Summary

Polyethersulfone (PES) membrane is a type of synthetic polymer membrane widely used in filtration and separation processes in various industries, including pharmaceutical, biotechnology, food and beverage, water treatment, and electronics. PES membranes are made from a high-performance thermoplastic polymer known as polyethersulfone, which exhibits excellent chemical resistance, thermal stability, and mechanical strength. PES membranes are characterized by their asymmetric pore structure, which allows for efficient removal of particles, microorganisms, and other contaminants from fluids while maintaining high flow rates and permeability. These membranes are commonly used in applications such as microfiltration, ultrafiltration, and sterile filtration, where high levels of purity, reliability, and performance are required. PES membranes offer advantages such as low protein binding, wide pH and temperature tolerance, and compatibility with a variety of solvents and chemicals, making them suitable for a broad range of filtration and separation applications.

The major global manufacturers of Polyethersulfone (PES) Membrane include Thermo

Fisher Scientific, Haining Nengda Filtration Equipment, Membrane Solutions, Sartorius, Merck, Sterlitech, Cnclear, PALL, Cytiva, DORSAN, Cobetter, Cole-Parmer India, GVS, Eaton, Hawach Scientific, etc. The global players competition landscape in this report is divided into three tiers.
