### Research Summary

Polyethylene film refers to a thin, flexible sheet made from polyethylene, a widely used thermoplastic polymer. This film can be produced using various processes, including blown film extrusion or cast film extrusion, depending on the desired properties and applications. Polyethylene films come in different forms, including high-density polyethylene (HDPE) and low-density polyethylene (LDPE), each offering distinct characteristics. HDPE films are known for their strength, rigidity, and high melting point, making them suitable for applications like packaging and industrial liners. LDPE films, being more flexible and having a lower melting point, are commonly used for items like plastic bags, agricultural films, and food packaging. Polyethylene films find extensive use in diverse industries due to their versatility, cost-effectiveness, and ease of fabrication through various film extrusion techniques. They serve purposes ranging from protective and packaging materials to agricultural and construction applications.

The major global manufacturers of Polyethylene Film include British Polythene Industries, DuPont, Dow, FSPG HI-TECH, Garware Polyester, Innovia Films Limited,

Inteplast Group, Achilles Corporation, AEP Industries, Amcor, Berry Plastics Corporation, PT Argha Karya Prima Industry Tbk, Rheinische Kunststoffwerke, Polycasa, SABIC Innovative Plastics, Sealed Air Corporation, Sumitomo Bakelite Company, Taghleef Industries, etc. The global players competition landscape in this report is divided into three tiers.
