### Research Summary

Polyethylene is a widely used thermoplastic polymer composed of repeating ethylene monomer units. It is known for its versatility, excellent chemical resistance, and low cost of production. Polyethylene exists in various forms, with the two most common being high-density polyethylene (HDPE) and low-density polyethylene (LDPE). HDPE is rigid, strong, and has a high melting point, making it suitable for applications such as containers, pipes, and packaging materials. LDPE, on the other hand, is more flexible and has a lower melting point, making it ideal for film applications, plastic bags, and squeezable bottles. Polyethylene is used extensively in packaging, construction, agriculture, and various consumer goods due to its lightweight nature, durability, and ease of processing through methods like extrusion and injection molding. Its adaptability and wide-ranging properties contribute to its prominence in the plastics industry.

The major global manufacturers of Polyethylene include Turtle Wax, DuPont, Exxon Mobil Corporation, LyondellBasell, SABIC, Sinopec Corporation, BP, Ineos, Borealis, Total, Shell, National Iranian Oil Company (NIOC), TASCOC Group, Ente Nazionale

Idrocarburi (ENI), CNPC, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading enterprises that command a substantial market share, hold a dominant industry position, possess strong competitiveness and influence, and generate significant revenue. The second tier includes companies with a notable market presence and reputation; these firms actively follow industry leaders in product, service, or technological innovation and maintain a moderate revenue scale. The third tier consists of smaller companies with limited market share and lower brand recognition, primarily focused on local markets and generating comparatively lower revenue.
