Research Summary

Polyferric sulfate (PFS) is a type of inorganic polymer coagulant used in water treatment processes. It is derived from iron salts and is particularly effective in the removal of impurities and contaminants from water. Polyferric sulfate is known for its excellent coagulation and flocculation capabilities, aiding in the precipitation and removal of suspended solids, organic matter, and color in water. It finds applications in the treatment of both drinking water and wastewater, contributing to the purification and clarification of water sources. Polyferric sulfate is valued for its stability over a wide range of pH levels, allowing for versatile use in different water treatment scenarios.
