Research Summary

Polyglycerol esters (PGEs) are versatile emulsifiers and stabilizers derived from the esterification of polyglycerol with fatty acids. They are widely used in food, cosmetics, and industrial applications due to their ability to improve the texture, stability, and consistency of products. In the food industry, PGEs serve as emulsifiers in baked goods, dairy products, and margarine, enhancing the mixing of oil and water phases. In cosmetics, they act as surfactants and moisturizers, contributing to the formulation of creams, lotions, and shampoos. Their biodegradable and non-toxic nature makes them environmentally friendly, while their customizable properties allow for tailored performance in specific applications, making PGEs a valuable ingredient across various industries.
