Research Summary

Polyglyceryl-2 Dipolyhydroxystearate is a cosmetic ingredient used primarily as an emulsifier and stabilizer in skincare and personal care products. It is derived from the esterification of polyglycerin with dipolyhydroxystearic acid, resulting in a compound with emulsifying properties. This ingredient is commonly found in formulations like creams, lotions, and makeup products to enhance the texture and stability of emulsions. Polyglyceryl-2 Dipolyhydroxystearate helps disperse oil and water phases in cosmetic formulations, ensuring a homogeneous and well-blended product. Additionally, it contributes to the overall skin-feel of the product, providing a smooth and non-greasy texture. As an emulsifying agent, it plays a crucial role in maintaining the integrity of the product, preventing ingredient separation and improving the overall user experience.
