Research Summary

Polyglyceryl-4 Caprate is a cosmetic ingredient widely used as an emulsifier, surfactant, and solubilizer in skincare and personal care formulations. It is a polyglycerol ester of capric acid, a medium-chain fatty acid derived from coconut or palm kernel oil. Polyglyceryl-4 Caprate functions to improve the compatibility of oil and water phases in cosmetic products, facilitating the creation of stable emulsions. This ingredient is often found in cleansers, lotions, and creams, contributing to the smooth texture and even distribution of the product upon application. As an emulsifier, it helps maintain the integrity of formulations, preventing phase separation and enhancing the overall stability of the product. Polyglyceryl-4 Caprate also acts as a surfactant, aiding in the gentle cleansing of the skin. Its multifunctional properties make it a valuable ingredient in cosmetic formulations, providing both emulsifying and cleansing benefits.

The major global manufacturers of Polyglyceryl-4 Caprate include Evonik Industries, Oleon, Hydrior, Jover Scientech, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading enterprises that
