Research Summary

Polyglycolic acid (PGA) is a biodegradable polymer belonging to the family of aliphatic polyesters. It is synthesized through the ring-opening polymerization of glycolide monomers. PGA is known for its high strength, flexibility, and rapid biodegradability, making it suitable for various applications in the medical and industrial fields. In the medical industry, PGA is commonly used as a material for absorbable sutures due to its excellent tensile strength and biocompatibility. As the sutures are gradually absorbed by the body, they eliminate the need for removal after the healing process. PGA is also employed in tissue engineering and drug delivery systems. In the industrial sector, PGA's biodegradable nature is advantageous for applications such as packaging materials and agricultural products, contributing to environmentally friendly and sustainable solutions. The versatile properties of polyglycolic acid make it a valuable material in both medical and industrial contexts where biodegradability and mechanical strength are essential.

The major global manufacturers of Polyglycolic Acid include Kureha, Corbion, BMG,

Evonik, Teleflex, Samyang Biopharm, Meta Biomed, Shanghai Pujing Chemical, Shenzhen Polymtek Biomaterial, Huizhou Foryou Medical Device, Danhua Technology, etc. The global players competition landscape in this report is divided into three tiers.
