Research Summary

Polyglycolide (PGA) is a synthetic polymer belonging to the family of aliphatic polyesters. It is derived from glycolic acid through the process of ring-opening polymerization. PGA is known for its biodegradability, high strength, and versatility, making it valuable in various applications. One of its prominent uses is in the field of medical materials, where it is widely employed for the manufacturing of absorbable sutures. PGA sutures are absorbed by the body over time, eliminating the need for removal after a patient heals from a surgical procedure. Additionally, PGA is utilized in tissue engineering for the development of biodegradable scaffolds and drug delivery systems. Its biocompatibility and ability to break down into non-toxic byproducts contribute to its appeal in medical applications. PGA's properties extend to environmental applications as well, including its use in biodegradable packaging materials. The versatile characteristics of polyglycolide make it a valuable polymer in both medical and eco-friendly industrial contexts.

The major global manufacturers of Polyglycolide (PGA) include Kureha, Corbion, BMG,

Evonik, Teleflex, Samyang Biopharm, Meta Biomed, Shanghai Pujing Chemical, Shenzhen Polymtek Biomaterial, Huizhou Foryou Medical Device, Danhua Technology, etc. The global players competition landscape in this report is divided into three tiers.
