### Research Summary

Polylactic acid (PLA) is a biodegradable and bio-based thermoplastic polymer derived from renewable resources such as corn starch, sugarcane, or other plant sources. PLA is considered a bioplastic because it is made from natural materials and can be composted under appropriate conditions, reducing environmental impact compared to traditional petroleum-based plastics. PLA is widely used in various applications, including packaging materials, food containers, disposable cutlery, textiles, medical implants, 3D printing filaments, and more. It offers good mechanical properties, biocompatibility, and versatility, making it an attractive alternative to conventional plastics for eco-friendly and sustainable products. However, it is important to note that while PLA is biodegradable under specific composting conditions, it may not degrade in typical landfill or marine environments, requiring proper disposal methods to maximize its environmental benefits.

The major global manufacturers of Polylactic Acid (PLA) Bioplastic include Braskem, NatureWorks, Novamont, BASF, Corbion, PSM, DuPont, Arkema, Kingfa, FKuR,
