Research Summary

Polylysine is a synthetic polymer composed of multiple lysine amino acids linked together in a chain. It is commonly used in biological and biochemical applications due to its unique properties, including its positive charge and biocompatibility. Polylysine is often employed as a coating material for cell culture dishes, slides, and other surfaces to promote cell adhesion and enhance cell growth. Additionally, it is utilized as a stabilizer and carrier for proteins, enzymes, and other biomolecules in various biomedical and biotechnological applications. Polylysine can also interact with nucleic acids, facilitating their delivery into cells and improving transfection efficiency in gene therapy and molecular biology research. Furthermore, its positively charged nature allows polylysine to bind to negatively charged molecules and surfaces, making it useful for applications such as drug delivery, tissue engineering, and surface modification in biomedical devices.

The major global manufacturers of Polylysine include Jnc-Corp, Siveele, Handary, Zhejiang Silver Elephant Bioengineering, Yiming Biological, Zhengzhou Bainafo Bioengineering, Lion King Biotechnology, Chengdu Jinkai Biology, Nanjing Shineking
