Research Summary

Polymer capacitors, also known as organic or conductive polymer electrolytic capacitors, are a type of electrolytic capacitor that utilizes conductive polymers as the electrolyte. Unlike traditional electrolytic capacitors that use liquid electrolytes, polymer capacitors have a solid conductive polymer electrolyte. This design enhances the capacitor's performance by offering lower equivalent series resistance (ESR), improved capacitance stability over temperature, and reduced impedance. Polymer capacitors are known for their high ripple current handling capabilities, long operational life, and low equivalent series inductance (ESL). They find applications in various electronic devices, including power supplies, motherboards, and other electronic circuits where high capacitance, low ESR, and long-term reliability are essential. The conductive polymer electrolyte contributes to their stable and efficient performance in demanding applications.

The major global manufacturers of Polymer Capacitor include Murata Manufacturing, NCC (Chemi-con), Nichicon, Panasonic Corporation, Kemet, AVX, Vishay, Apaq

Technology, Rubycon Corporation, ROHM Semiconductor, Lelon, Nantong Jianghai capacitor, Yageo Group, Hunan Aihua Group, Illinois Capacitor, etc. The global players competition landscape in this report is divided into three tiers.
