Research Summary

Polymer Dispersed Liquid Crystal (PDLC) film is a type of smart material that consists of liquid crystal droplets dispersed in a polymer matrix. These droplets can be aligned or disoriented based on the application of an electric field. In their natural state, the liquid crystal droplets scatter light, making the film opaque. However, when an electric field is applied, the liquid crystal molecules align, allowing light to pass through and rendering the film transparent. This property makes PDLC film suitable for applications such as privacy windows, smart glass, and electronic display devices where dynamic control of light transmission is desired. PDLC films offer flexibility, ease of integration, and energy efficiency, making them increasingly popular in architectural and automotive applications for privacy control and energy-efficient lighting solutions.

The major global manufacturers of Polymer Dispersed Liquid Crystal (PDLC) Film include Polytronix, DMDisplay, IRISFILM, Smart Films International, Unite Glass, Inno Glass, Toppan Printing, Singyes New Materials, Benq Materials, Shenzhen Huake
