Research Summary

Polymer ligating clips are medical devices used for ligating or clamping blood vessels or other tubular structures during surgical procedures. These clips are typically made from biocompatible polymers and are designed to be non-absorbable. The polymer ligating clips provide a secure closure to prevent bleeding or leakage and are commonly used in various surgical fields, including general surgery, gynecology, and urology. One advantage of polymer ligating clips is their non-metallic nature, reducing the risk of interference with imaging techniques such as MRI. The clips come in various sizes and designs to accommodate different surgical needs. The use of polymer materials in ligating clips contributes to their biocompatibility and avoids potential issues associated with metal clips, making them a preferred choice in certain surgical applications.

The major global manufacturers of Polymer Ligating Clips include Teleflex, Grena, Medtronic, Kangji Medical, Sunstone, Sinolinks, Nanova Biomaterials, etc. The global players competition landscape in this report is divided into three tiers.
