### Research Summary

Polymer nanofibers are ultrafine fibers with diameters typically in the nanometer range, and they are produced through various techniques such as electrospinning or melt blowing. These nanofibers are composed of synthetic or natural polymers and exhibit unique properties due to their extremely small size and high surface area-to-volume ratio. Polymer nanofibers find applications in diverse fields, including filtration, tissue engineering, drug delivery, sensors, and protective textiles. Their small diameter and large surface area make them suitable for creating materials with enhanced mechanical strength, flexibility, and improved performance in specific applications. The ability to tailor the composition and structure of polymer nanofibers offers a wide range of possibilities for developing advanced materials with novel properties for various technological and biomedical applications.

The major global manufacturers of Polymer Nanofiber include Espin Technologies, Ahlstrom-Munksj?, Dupont, Hollingsworth & Vose, Donaldson, Teijin, Toray Industries, Asahi Kasei, Eneos, Finetex EnE, etc. The global players competition landscape in this
