Research Summary

Polymethacrylimide foam, also known as PMI foam, is a type of high-performance closed-cell foam material with a unique combination of properties that make it suitable for various aerospace and industrial applications. It is lightweight, rigid, and possesses excellent thermal and mechanical stability, as well as a high strength-to-weight ratio. PMI foam is often used in the manufacturing of composite structures, sandwich panels, and core materials for aerospace components such as aircraft wings, fuselage sections, and helicopter rotor blades. Its low density and thermal resistance also make it an ideal choice for thermal insulation in spacecraft and satellite applications. PMI foam is known for its dimensional stability, even at high temperatures, and it is resistant to creep and fatigue, ensuring the long-term reliability of the structures it supports. Additionally, its closed-cell structure provides buoyancy and water resistance, making it suitable for marine applications such as boat hulls and marine buoyancy devices.

The major global manufacturers of Polymethacrylimide Foam include Evonik Industries AG, Hunan Zihard Material Technology, Cashem Advanced Materials Hi-tech, etc. The
