Research Summary

Polyolefin Elastomers (POE) are a class of thermoplastic elastomers derived from the copolymerization of ethylene with a small amount of an α -olefin, such as propylene or butene. This results in a material that combines the flexibility and elasticity of rubber with the processability of thermoplastics. POEs exhibit excellent mechanical properties, such as high tensile strength, low-temperature flexibility, and resilience.

The major global manufacturers of Polyolefin Elastomers (POE) include Dow, Mitsui Chemical, LG Chemical, SABIC SK Nexlene Company (SSNC), ExxonMobil Chemical, Borealis, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading enterprises that command a substantial market share, hold a dominant industry position, possess strong competitiveness and influence, and generate significant revenue. The second tier includes companies with a notable market presence and reputation; these firms actively follow industry leaders in product, service, or technological innovation and maintain a moderate revenue scale. The third tier consists of smaller companies with limited

market share and lower brand recognition, primarily focused on local markets and generating comparatively lower revenue.
