Research Summary

Polyoxymethylene (POM), commonly known as acetal or polyacetal, is a high-performance engineering thermoplastic resin with excellent mechanical properties, dimensional stability, and chemical resistance. It is often used in applications where a combination of strength, stiffness, and low friction is required. POM is characterized by its low moisture absorption, low coefficient of friction, and good wear resistance, making it suitable for precision parts in industries such as automotive, electrical, and consumer goods. The resin can be processed through various methods, including injection molding and extrusion, allowing for the production of complex and precisely engineered components. POM is available in both homopolymer and copolymer grades, each offering specific advantages based on the desired application requirements.

The major global manufacturers of Polyoxymethylene Resin include DuPont, MEP, Polyplastics, Celanese, BASF, Asahi Kasei, LyondellBasell, Kolon Plastics, Yunnan Yuntianhua, ZHCC, etc. The global players competition landscape in this report is divided into three tiers.
