Research Summary

Polyphthalamide (PPA) is a high-performance engineering thermoplastic resin belonging to the polyamide family. It is produced through the polymerization of aromatic diamines and dicarboxylic acids, resulting in a polymer with excellent thermal and mechanical properties. PPA exhibits high melting points, good chemical resistance, and dimensional stability, making it suitable for applications that require high-temperature performance and resistance to aggressive chemicals. PPA is commonly used in the automotive industry for various under-the-hood components, electrical connectors, and fuel system parts. Its combination of strength, toughness, and resistance to wear and chemicals also finds applications in electronics, industrial machinery, and consumer goods. PPA's versatility makes it valuable in situations where other traditional engineering plastics may not meet the stringent performance requirements.

The major global manufacturers of Polyphthalamide (PPA) include DuPont, Solvay, EMS-CHEMIE, Mitsui Chemicals, Arkema, Evonik, Sabic, BASF, AKRO-PLASTIC, KEP, DZT, NHU Special Materials, etc. The global players competition landscape in this
