### Research Summary

Polypropylene terpolymer is a type of polymer composed of three different monomers of propylene. In other words, it is a copolymer of propylene with two other monomers. This composition allows for the creation of polypropylene with enhanced properties compared to traditional homopolymer polypropylene. The addition of other monomers can modify the material's characteristics such as flexibility, impact resistance, heat resistance, and chemical resistance, making it suitable for a wider range of applications. Polypropylene terpolymers find use in various industries including automotive, packaging, textiles, and consumer goods where durable, lightweight, and versatile materials are required.

The major global manufacturers of Polypropylene Terpolymer include LyondellBasell, Hanwha TotalEnergies Petrochemical, Lotte Chemical, The Polyolefin Company (Singapore) (TPC), Mitsui Chemical, Ineos, Braskem, Borealis, LG Chem, Sinopec, CNPC, HMC Polymers, Formosa Plastics, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading

enterprises that command a substantial market share, hold a dominant industry position, possess strong competitiveness and influence, and generate significant revenue. The second tier includes companies with a notable market presence and reputation; these firms actively follow industry leaders in product, service, or technological innovation and maintain a moderate revenue scale. The third tier consists of smaller companies with limited market share and lower brand recognition, primarily focused on local markets and generating comparatively lower revenue.
