Research Summary

Polypropylene waxes are a type of synthetic wax derived from the polymerization of propylene. These waxes are characterized by their high melting points, low viscosity, and excellent hardness, making them valuable in various applications. Polypropylene waxes are often used as additives in the production of plastics, rubber, and coatings to improve processing, enhance surface properties, and provide lubrication. In the plastics industry, they act as internal and external lubricants, aiding in the processing of polymers by reducing friction and improving flow characteristics during molding or extrusion. Polypropylene waxes also contribute to the gloss, scratch resistance, and durability of coatings in the paint and ink industries. Their versatility makes them suitable for a range of applications where modifications to material properties and processing improvements are desired.

The major global manufacturers of Polypropylene Waxes include Clariant, COSCHEM, Honeywell, Lubrizol, Deurex, Shamrock Technologies, Lion-chemtech, Mitsui Chemicals, Euroceras, Nanjing Tianshi, Chengdu Tongli, etc. The global players
