Research Summary

Polyquaternium refers to a group of synthetic polymers that contain quaternary ammonium groups in their structure. These polymers are often used in personal care and cosmetic products for their conditioning and film-forming properties. Polyquaternium compounds have a positive charge, which makes them effective in hair care products as cationic conditioning agents. They adhere to the hair's surface, imparting a smooth and conditioned feel, reducing static electricity, and improving combability. Polyquaternium polymers can be found in a variety of cosmetic formulations such as shampoos, conditioners, styling products, and skin care items, contributing to the overall sensory and performance characteristics of these products.

The major global manufacturers of Polyquaternium include Dow, KCI, Solvay, Nouryon, Lubrizol, Clariant, TOHO Chemical, TINCI, BASF, etc. The global players competition landscape in this report is divided into three tiers.
