Research Summary

Polysorbate refers to a class of nonionic surfactants commonly used in the pharmaceutical, food, and cosmetic industries. The most well-known member of this class is Polysorbate 20, also known as Tween 20, which is a polyethylene sorbitan monolaurate. Polysorbates are synthesized by reacting sorbitan esters with ethylene oxide, resulting in a versatile group of water-soluble surfactants. These compounds have the ability to solubilize oils and enhance the stability of emulsions. Polysorbates find application in various products, including pharmaceutical formulations, where they aid in solubilizing hydrophobic drugs, and in the food industry as emulsifiers in products like ice cream. Additionally, they are utilized in cosmetics and personal care products for their emulsifying and dispersing properties. The specific type of Polysorbate used depends on the intended application and the required characteristics of the final product.

The major global manufacturers of Polysorbate include Croda, KAO, SEPPIC, Oleon, Guangdong Runhua Chemistry, Jiangyin Huayuan Chemical, Mohini Organics, Vantage
