### Research Summary

Polystyrene resin recycling involves the process of reusing polystyrene, a type of plastic known for its lightweight and insulating properties, after it has been discarded. Typically used in packaging materials, disposable cups, and insulation products, polystyrene can be recycled through various methods. These include mechanical recycling, where the plastic is melted and reformed into new products, and chemical recycling, which breaks down the material into its chemical components for reuse. Recycling polystyrene resin helps reduce the environmental impact of plastic waste by diverting it from landfills and incineration, conserving resources, and reducing the need for new plastic production. However, challenges such as contamination and cost-effectiveness of recycling processes remain, prompting ongoing efforts to improve efficiency and expand recycling infrastructure.

The major global manufacturers of Polystyrene Resin Recycling include INTOCO Recycling, Pana-Chemical, Dart Container Corporation, Interzero, PreZero International, BEWI, Atlas Molded Products, RAPAC, Ronson Recycling, Eslava
