Research Summary

Polythiols are a class of organic compounds characterized by the presence of multiple thiol (-SH) functional groups within their molecular structure. These compounds are valued for their ability to undergo thiol-ene reactions, which involve the addition of thiol groups to carbon-carbon double bonds, leading to the formation of crosslinked polymer networks. Polythiols are widely used in the field of polymer chemistry, particularly in the synthesis of thiol-ene polymers and resins. The thiol-ene reaction is often employed in the development of various materials, including adhesives, coatings, and dental restorative materials, due to its efficiency and versatility. The crosslinking nature of polythiols enhances the mechanical and chemical properties of the resulting polymers, making them suitable for applications where durability and strength are crucial.

The major global manufacturers of Polythiols include Huntsman, Toray, Mitsui Chemicals, Resonac, Efirm, BrunoBock, Miwon Commercial, etc. The global players competition landscape in this report is divided into three tiers.
