Research Summary

A polyurethane medical catheter is a flexible, biocompatible tube made from polyurethane, a versatile polymer known for its durability, elasticity, and chemical resistance. These catheters are widely used in medical applications, such as vascular access, urinary drainage, and diagnostic procedures, due to their ability to provide patient comfort while maintaining structural integrity. Polyurethane's unique properties allow for thin-walled designs that enhance flow rates without compromising flexibility or kink resistance. Additionally, its compatibility with various sterilization methods and potential for surface modification, such as antimicrobial coatings, makes it an ideal material for reducing infection risks and ensuring safe, long-term use. Polyurethane medical catheters are integral to modern healthcare, offering reliable and patient-friendly solutions for a variety of clinical needs.
