### Research Summary

Polyvision Privacy Glass, also known as switchable privacy glass or smart glass, is a type of glass that can switch between transparent and opaque states with the application of an electrical current. This innovative glass technology incorporates a special laminated construction with a polymer dispersed liquid crystal (PDLC) layer or suspended particle device (SPD) layer sandwiched between two glass panels. When an electrical voltage is applied to the glass, the liquid crystal molecules align, allowing light to pass through and rendering the glass transparent. Conversely, when the voltage is turned off, the liquid crystal molecules scatter randomly, causing the glass to become opaque and providing privacy and visual obstruction. Polyvision Privacy Glass offers versatile applications in architectural design, interior spaces, and commercial settings, providing instant privacy control, glare reduction, and aesthetic enhancement. It is commonly used in office partitions, conference rooms, healthcare facilities, hotels, and residential environments to create dynamic and adaptable spaces that prioritize privacy, comfort, and functionality.

The major global manufacturers of Polyvision Privacy Glass include AGC Inc., Arcon Flachglas-Veredlung GmbH & Co. KG, Central Glass Co., Ltd., Saint-Gobain, Corning Inc., Euroglas GmbH, Koch Industries Inc., Nippon Sheet Glass, Vitro Architectural Glass, Sisecam Group, etc. The global players competition landscape in this report is divided into three tiers.
