Research Summary

Pool cleaners, also known as pool cleaning devices or automatic pool cleaners, are specialized tools designed to clean and maintain the cleanliness of swimming pools. These devices come in various types, including suction-side cleaners, pressure-side cleaners, and robotic cleaners. Suction-side cleaners attach to the pool's suction line and use the pool's pump to move around and collect debris. Pressure-side cleaners utilize the pool's return jet to create a water flow that propels the cleaner and picks up debris. Robotic cleaners are self-contained units with their own pump and filtration system, operating independently of the pool's circulation system. Pool cleaners are equipped with brushes, suction ports, or scrubbing mechanisms to remove dirt, leaves, algae, and other contaminants from the pool floor, walls, and surface. Regular use of pool cleaners helps maintain water quality, improves circulation, and reduces the need for manual cleaning, contributing to a more enjoyable and hygienic swimming environment.
