### Research Summary

Portable sawmills are compact and mobile machines designed for on-site wood processing, allowing users to transform logs into lumber at the location where the trees are felled. Unlike traditional stationary sawmills, portable sawmills can be easily transported to different locations, making them suitable for remote or challenging terrains. These sawmills typically consist of a saw blade, power source (either gas-powered or electric), and a frame that supports the log during cutting. The portable nature of these sawmills provides flexibility for small-scale logging operations, woodworking projects, and timber harvesting in areas with limited access to transportation. They have become popular among hobbyist woodworkers, farmers, and professionals who require a cost-effective and efficient way to process logs into lumber on a smaller scale.

The major global manufacturers of Portable Sawmills include Wood-Mizer Sawmills, TimberKing, LOGOSOL, Norwood Sawmills, Baker Products, Serra (Wintersteiger), Hardwood Mills Australia, Hud-Son Sawmills, Woodland Mills, WoodMaxx, etc. The
