### Research Summary

A portable solar panel is a compact and mobile photovoltaic device designed to harness solar energy and convert it into electricity. These panels consist of solar cells that capture sunlight and generate direct current (DC) electrical power. The portability of these solar panels is facilitated by lightweight materials, foldable designs, or integrated carrying features, allowing users to transport and set them up easily in various locations. Portable solar panels are commonly used to charge electronic devices, such as smartphones, laptops, and camping equipment, during outdoor activities. They are also employed in off-grid settings, emergency situations, and as backup power sources for remote locations where access to conventional power is limited.
