### Research Summary

A portable turbidity analyzer is a compact and handheld device used to measure the clarity or turbidity of liquids, particularly water. Turbidity refers to the amount of suspended particles or sediment in the water that scatter light, affecting its transparency. These analyzers utilize a light source and a detector to quantify the amount of light scattered by particles in the liquid sample, providing a turbidity measurement in nephelometric turbidity units (NTU) or other standardized units. Portable turbidity analyzers are essential tools in environmental monitoring, water treatment processes, and field research where real-time or on-site assessment of water quality is required. They offer convenience, accuracy, and rapid measurement capabilities, allowing for immediate analysis and decision-making in various applications such as drinking water monitoring, wastewater treatment plant operations, and ecological studies.

The major global manufacturers of Portable Turbidity Analyzer include THERMO FISHER SCIENTIFIC, Hanna Instruments, Xylem, Merck, HACH, Teledyne FLIR LLC,
