Research Summary

Post-Consumer Resin (PCR) refers to recycled plastic material derived from consumer products that have completed their life cycle, been used, and then collected for recycling. PCR is obtained through the recycling of items such as plastic bottles, containers, and packaging materials that consumers dispose of in recycling systems. These materials undergo a recycling process to be cleaned, processed, and reprocessed into new plastic products. PCR is an integral component of sustainable and circular economy practices as it reduces the demand for virgin plastic, conserving resources, and minimizing environmental impact. Manufacturers and industries increasingly incorporate PCR into their production processes to promote environmental responsibility and contribute to the reduction of plastic waste in landfills and oceans. The use of PCR helps close the loop on plastic life cycles and supports the creation of a more sustainable and eco-friendly approach to plastic utilization.

The major global manufacturers of Post Consumer Resin (PCR) include Far Eastern New Century, Longfu Recycling Energy Sciencetech, MBA Polymers, DAK Americas,

Plastipak Holdings, Visy, Envision, Evergreen Plastics, Imerys Group, Indorama Ventures (Custom Polymers PET), Plastrec, Greentech, KW Plastics, Viridor, EFS Plastics, Vogt-Plastic, Biffa, Plastic Forests, St. Joseph Plastics, Tangent Technologies, etc. The global players competition landscape in this report is divided into three tiers.
