Research Summary

Potable water treatment and wastewater treatment are essential processes in ensuring the availability of clean drinking water and the safe disposal of wastewater. Potable water treatment involves the purification of raw water from natural sources, such as rivers or lakes, to meet the drinking water standards set by regulatory authorities. Treatment typically includes processes like coagulation, sedimentation, filtration, and disinfection to remove impurities, contaminants, and microorganisms. On the other hand, wastewater treatment involves the purification of used water from households, industries, and commercial activities before it is released back into the environment or reused.
