Research Summary

Potassium cyanide (KCN) is a highly toxic, colorless, crystalline salt with the chemical formula KCN. It is a potent poison that interferes with the body's ability to utilize oxygen, primarily by inhibiting the function of enzymes involved in cellular respiration. Due to its extreme toxicity, potassium cyanide has gained notoriety as a deadly substance and is known for its use in certain industrial processes, such as gold mining, where it is employed to extract gold from ores. The compound is highly regulated and controlled due to its lethal nature, and strict safety precautions are necessary when handling it. Because of its potential for misuse, potassium cyanide is not readily available to the general public, and its use is heavily restricted.

The major global manufacturers of Potassium Cyanide include Chemours, Anhui Shuguang Chemical, Hebei Chengxin, Nippon-Soda, Hindusthan Chemicals, Draslovka, etc. The global players competition landscape in this report is divided into three tiers.
