Research Summary

Potassium tert-butoxide, with the chemical formula KOtBu , is a strong base and a versatile reagent in organic synthesis. It is the potassium salt of tert-butanol (t-butyl alcohol) and is commonly used as a strong, non-nucleophilic base in various chemical reactions. The tert-butoxide ion (OtBu^-) is sterically hindered due to the bulky tert-butyl group, making it less prone to nucleophilic attacks compared to other alkoxide ions. Potassium tert-butoxide finds application in organic transformations, such as deprotonation reactions, eliminations, and nucleophilic substitutions. Its use is prevalent in the synthesis of pharmaceuticals, agrochemicals, and other organic compounds where precise control over reaction conditions and selectivity is crucial. Due to its reactivity and strong basic nature, handling potassium tert-butoxide requires careful precautions, and it is commonly employed in anhydrous and inert environments to prevent side reactions.

The major global manufacturers of Potassium Tert-Butoxide include Shandong Xisace New Material, GenChem & GenPharm, Evonik, Albemarle, Suparna Chemicals, Callery,

etc. The global players competition landscape in this report is divided into three tiers.
