Research Summary

Potting compound, also known as potting resin or encapsulant, is a material used in electronics and electrical applications to encase and protect electronic components or assemblies. Typically composed of polymers, epoxies, or silicones, potting compounds serve several purposes, including providing insulation, enhancing structural integrity, and safeguarding electronic circuits from environmental factors such as moisture, chemicals, and mechanical stress. The potting process involves filling the housing or enclosure around the electronic components with the liquid or gel-like potting compound, which then cures or solidifies to form a protective, durable encapsulation. This encapsulation helps prevent damage, corrosion, and electrical interference, making it particularly useful in applications where longevity, reliability, and environmental resistance are crucial, such as in the manufacturing of electronic modules, sensors, and other sensitive devices.

The major global manufacturers of Potting Compound include Henkel, Dow Corning, Shin-Etsu Chemical, Momentive, Electrolube, CHT Group, H.B.Fuller, Nagase, Wevo-

Chemie, Lord Corporation, Elkem Silicones, Elantas, Huntsman Advanced Materials, Wacker-Chemie, Huitian New Materials, etc. The global players competition landscape in this report is divided into three tiers.
