Research Summary

A power battery cooling system is a vital component found in electric vehicles (EVs) and hybrid electric vehicles (HEVs) designed to manage the temperature of the vehicle's battery pack during operation. It ensures that the battery cells maintain an optimal temperature range to enhance performance, efficiency, and longevity while preventing overheating and thermal degradation. Typically consisting of coolant fluid, heat exchangers, pumps, and control systems, the cooling system circulates coolant through the battery pack, absorbing excess heat generated during charging and discharging processes. Heat exchangers then dissipate this heat to the surrounding environment, with pumps regulating the flow of coolant and control systems monitoring and adjusting cooling operation as needed. By effectively controlling battery temperature, the power battery cooling system contributes to the reliability, safety, and overall performance of electric and hybrid vehicles.

The major global manufacturers of Power Battery Cooling System include Mahle, Valeo, Dana, Hanon Systems, Gentherm, Tinklun, Webasto Electrified, Aotecar New Energy
