Research Summary

A power capacitor is an electrical component designed to store and release electrical energy in an electrical system. It is utilized to improve the power factor in alternating current (AC) circuits. The power capacitor helps to offset the lagging power factor caused by inductive loads such as electric motors and transformers. By introducing reactive power in the form of capacitive reactance, power capacitors can counteract the inductive reactance, leading to an improved power factor and more efficient power utilization. Power capacitors come in various types, including fixed and variable capacitors, and they play a crucial role in enhancing the efficiency and stability of electrical systems, particularly in industrial and commercial applications where power quality is essential.

The major global manufacturers of Power Capacitor include Schneider Electric, Eaton, ABB, General Electric, Aerovox, Larsen & Toubro, Sumitomo Electric Industries, AB Power System, Clariant Power System, Panasonic, Taiyo Yuden, etc. The global players competition landscape in this report is divided into three tiers.
