Research Summary

Power Distribution Units (PDUs) are devices used in data centers, server rooms, and other facilities to distribute electrical power to multiple network or server equipment. PDUs serve as a centralized power distribution point, taking power from a source (such as a UPS or mains supply) and delivering it to various connected devices through multiple outlets. They come in various configurations, including basic PDUs that provide simple power distribution, metered PDUs that offer monitoring capabilities, and intelligent or managed PDUs that provide advanced features like remote monitoring, power metering, and control. PDUs are critical for managing power distribution efficiently, preventing overloads, and ensuring reliable operation of IT equipment in data centers and server racks. Their flexibility and monitoring capabilities contribute to effective power management strategies, helping organizations optimize energy usage, improve reliability, and simplify maintenance tasks in their data center environments.
