Research Summary

A Power over Ethernet (PoE) device refers to any equipment or endpoint that receives electrical power and data through a single Ethernet cable. These devices are designed to operate in PoE-enabled networks, where power is supplied by PoE injectors, midspan devices, or PoE-compatible network switches. Common PoE devices include IP cameras, wireless access points, VoIP phones, and various sensors. PoE simplifies the deployment and installation of such devices by eliminating the need for separate power cables, making it particularly advantageous in scenarios where power sources may be limited or challenging to access. PoE devices typically adhere to IEEE 802.3af or IEEE 802.3at standards, ensuring compatibility with PoE infrastructure and allowing for efficient power delivery along with data connectivity over the Ethernet network.

The major global suppliers of Power Over Ethernet Device include Cisco, Avaya, HP, Dell, Brocade, Netgear, Alcatel-Lucent, Juniper, D-Link, Adtran, Extreme, Alaxala, Huawei, ZTE, etc. The global players competition landscape in this report is divided into three tiers.
