Research Summary

Power over Ethernet (PoE) lighting is an innovative technology that utilizes Ethernet cables to deliver both electrical power and data to lighting fixtures. In PoE lighting systems, each luminaire is equipped with a PoE-compatible LED driver or PoE-to-LED converter. These devices receive power and control signals through the Ethernet cable from a PoE network switch or injector, eliminating the need for separate electrical wiring. PoE lighting systems offer flexibility in terms of control and automation, allowing for easy integration with building management systems and smart lighting solutions. This technology simplifies installation, facilitates energy-efficient lighting management, and provides granular control over individual fixtures or zones. PoE lighting is gaining popularity in commercial buildings, offices, and smart home applications due to its scalability, energy efficiency, and the potential for intelligent lighting control.
