Research Summary

PPS filaments refer to filaments made from Polyphenylene Sulfide (PPS), a high-performance thermoplastic polymer known for its excellent chemical resistance, high-temperature stability, and mechanical strength. PPS is often used in filament form for 3D printing applications, where its robust properties make it suitable for creating parts that need to withstand demanding environments. PPS filaments offer dimensional stability, low moisture absorption, and resistance to various chemicals, making them suitable for industrial and engineering applications. The 3D printing of PPS allows for the creation of durable and heat-resistant components used in industries such as automotive, aerospace, and electronics. The ability of PPS to maintain its properties under high temperatures and harsh conditions makes it a valuable material for producing functional and reliable 3D-printed parts.

The major global manufacturers of PPS Filaments include Toray, Toyobo, KB Seiren, Nantong NTEC, Changzhou Co-Win, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading enterprises
