Research Summary

Precipitated alumina trihydrate, also known as ATH, is a white, crystalline powder derived from the precipitation of aluminum-containing compounds in a controlled chemical process. This material is a hydrated form of aluminum oxide, with a chemical formula of $Al_2O_3 \cdot 3H_2O$. Precipitated alumina trihydrate is often produced by treating aluminum-containing minerals or solutions with alkaline substances, leading to the formation of fine, needle-like crystals. This compound is known for its flame-retardant properties and is widely used as a flame retardant and smoke suppressant in various applications, including plastics, rubber, and coatings. Due to its ability to release water vapor when exposed to heat, precipitated alumina trihydrate functions as an effective fire retardant by cooling and diluting flammable gases, inhibiting the spread of flames. Additionally, it finds use in the production of solid surface materials, adhesives, and certain chemicals, contributing to its versatility in different industrial sectors.

The major global manufacturers of Precipitated Alumina Trihydrate include Huber, CHALCO, Nabaltec, KC Corp, MAL Magyar Aluminium, Zibo Pengfeng, Jianzhan
