Research Summary

Precipitated silicas are synthetic amorphous silicon dioxide materials that are produced through a controlled chemical reaction between sodium silicate and mineral acid. This process leads to the formation of highly porous and fine particles of silica. Precipitated silicas are known for their unique physical and chemical properties, including high surface area, excellent dispersibility, and controlled particle size distribution. These characteristics make them valuable additives in a variety of industries. In the rubber industry, precipitated silicas enhance the performance of tires by improving wet grip, reducing rolling resistance, and enhancing wear resistance. In the food and pharmaceutical industries, they serve as flow agents and anti-caking agents. Additionally, precipitated silicas find applications in the production of paints, coatings, adhesives, and personal care products due to their rheological control and reinforcing properties. The controlled manufacturing process allows for tailoring the properties of precipitated silicas to meet specific application requirements.

The major global manufacturers of Precipitated Silicas include Evnoik, Rhodia (Solvay),

Huber Engineered Materials, PPG, WR Grace, OSC Group, Tosoh Silica, Quechen Silicon, Zhuzhou Xinglong, Fujian Zhengsheng, Shandong Link, Shandong Jinneng, Sanming Zhengyuan Chemical, Hengcheng Silica, Fujian Fengrun, Tonghua Shuanglong, Jiangxi Blackcat, Shanxi Tond, etc. The global players competition landscape in this report is divided into three tiers.
