### Research Summary

Pregelatinized starch is a modified starch product that has undergone a cooking and drying process, resulting in a readily dispersible and easy-to-use form. This starch is pre-cooked and then dried to create a granular or powder-like texture. The cooking process breaks down the starch granules, leading to a product that readily swells and hydrates in cold or hot water without the need for additional cooking. Pregelatinized starch finds extensive use in various industries, including food and pharmaceuticals, where it serves as a thickening, stabilizing, or binding agent in applications like soups, sauces, gravies, and pharmaceutical tablets. Its quick dispersibility and consistent performance make pregelatinized starch a versatile ingredient, enhancing the texture and functionality of a wide range of products.

The major global manufacturers of Pregelatized Starch include Cargill, Ingredion, Tate & Lyle, Grain Processing Corporation, Avebe, AGRANA, Colorcon, Galam, Emsland Group, Roquette, DFE Pharma, etc. The global players competition landscape in this report is divided into three tiers.
