Research Summary

A press brake is a machine used in metalworking to bend, fold, or shape sheet metal and other materials into precise angles or forms. It operates by using a punch and die system, where the sheet metal is placed between a punch (a tool that presses down) and a die (a shaped tool that the material is bent over). The press brake applies force to the material, bending it according to the shape of the die. This equipment is widely used in industries like automotive, aerospace, construction, and fabrication for producing parts such as brackets, panels, and enclosures. Press brakes come in various configurations, including manual, hydraulic, and CNC-controlled versions, with the latter offering advanced features like programmable bending sequences, precision adjustments, and automated operations for higher efficiency and consistency in production.

The major global manufacturers of Press Brake include TRUMPF, Amada, Bystronic, Salvagnini, Prima Industrie, Durmazlar, Murata Machinery, Yawei, Cincinnati, Komatsu, LVD, Ermaksan, ADH, MC Machinery Systems, Accurpress, Wuxi Shenchong, etc. The global players competition landscape in this report is divided into three tiers.
